SPOT VIEW

Fiber Etch Series

Product Description

Spot View is a textile laminated glass that expands the Dot Etch concept through larger and more open translucent zones. Using the same controlled fiber removal process, one of the textile fibers is chemically removed to create circular openings approximately twenty millimeters in diameter. These openings allow partial views through the surface while the surrounding textile softly diffuses light. From a distance, the surface reads as calm and uniform. As the observer approaches, the larger openings reveal fragments of the background, creating a subtle dialogue between visibility and separation. The resulting glass balances openness and privacy, allowing spatial connection without full transparency.

Spot View introduces a dynamic yet restrained visual condition, making it particularly suited for architectural environments where light, depth, and controlled views contribute to a calm spatial atmosphere.

Material & Construction

- Laminated textile glass
- Textile layer: woven textile with selective chemical fiber removal
- Circular openings approximately 20 mm in diameter
- Remaining textile fibers diffuse surrounding light
- Textile membrane preserved between glass panes through lamination
- Double-sided visual depth through textile and etched openings

Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

Applications

Interior partitions · Walls · Space dividers · Lighting elements · Building facades

Customization

Opening diameter, pattern density, textile type, and panel dimensions can be adapted according to project-specific architectural requirements.

Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
