WHITE HOLE

Round Hole Series

Product Description

White Hole is a laminated glass product developed from dense white poplin that has been chemically perforated with five-millimeter circular openings before lamination. The regular rhythm of perforations introduces controlled points of light transmission while the surrounding textile softly diffuses the remaining light. From a distance, the surface reads as calm and uniform, forming a restrained architectural membrane. As one approaches, the perforations become more legible, revealing the textile structure captured within the glass. Light passing through the circular openings casts subtle patterns and soft shadows into the surrounding space.

White Hole balances visual clarity with material softness, creating a surface that maintains privacy while allowing light and atmosphere to pass through. The result is a calm and meditative architectural material suited for environments that require visual comfort and spatial calm.

Material & Construction

- Laminated textile glass
- Textile layer: dense white poplin textile
- Chemical perforation with 5 mm circular openings
- Perforation pattern preserved within laminated glass
- Visible textile fibers embedded within the laminate
- Double-sided visual effect through textile structure

Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

Applications

Medical practices · Laboratories · Public interiors · Space partitions · Lighting elements

Customization

Perforation density, textile type, panel dimensions, and transparency levels can be adapted according to architectural project requirements.

Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
