LARGE WHITE HOLE

Round Hole Series

Product Description

Large White Hole is a laminated textile glass produced from dense white poplin chemically perforated with twenty-millimeter circular openings. The increased scale of the perforations allows greater visual openness while maintaining the calm architectural character of the textile membrane. From a distance, the surface reads as clean and structured, forming a disciplined grid of circular openings. As one approaches, the textile nature becomes visible through fine fibers and irregular edges preserved within the laminate. Light passing through the larger perforations introduces clearer views and stronger spatial connection between spaces.

Large White Hole balances clarity and softness, creating a surface that allows visibility and light transmission while maintaining the tactile presence of textile within glass. The result is a refined architectural material suited for environments where openness and visual order are required.

Material & Construction

- Laminated textile glass
- Textile layer: dense white poplin textile
- Chemical perforation with 20 mm circular openings
- Perforation structure preserved within laminated glass
- Visible textile fibers embedded within the laminate
- Double-sided visual effect through textile structure

Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

Applications

Offices · Laboratories · Pharmacies · Medical practices · Minimalist interiors

Customization

Perforation density, textile type, panel dimensions, and transparency levels can be adapted according to architectural project requirements.

Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
