## DOUBLE OPEN WEAVE HOLE

### Round Hole Series

### Product Description

Double Open-Weave Hole is a laminated textile glass composed of two perforated open-weave textiles layered together before lamination. One textile is indigo blue and the other black. Their overlapping structures create a subtle moiré effect as light passes through the material. Both textiles are perforated with circular openings, and their slight offset produces varying levels of transparency depending on viewing angle and distance. As light moves across the surface, the two layers interact visually, generating depth and shifting patterns within the glass.

From a distance, the surface appears calm and atmospheric. At closer range, the layered textile structure becomes visible, revealing fine yarns, perforations, and overlapping fiber networks preserved within the laminate. The result is a dynamic architectural surface that combines textile softness with optical movement.

### Material & Construction

- Laminated textile glass
- Textile layers: two perforated open-weave textiles (indigo blue and black)
- Chemical perforation with circular openings
- Offset textile layers creating moiré interaction
- Visible yarns and textile fibers preserved within the laminate
- Double-sided visual depth through layered textile structure

### Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

### Applications

Corporate spaces · Offices · Feature panels · Lighting elements

### Customization

Textile color combinations, perforation density, panel dimensions, and transparency levels can be adapted according to architectural project requirements.

### Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
