LARGE WHITE SQUARE

Square Hole Series

Product Description

Large White Square is a laminated textile glass produced from dense white poplin that is chemically perforated with a grid of ten-millimeter square openings before lamination. The larger scale of the perforations introduces greater visual openness while maintaining the clarity and order of the square grid. From a distance, the surface reads as a precise architectural plane defined by a disciplined geometric rhythm. As the viewer approaches, the textile structure becomes visible through fine fibers and irregular edges preserved within the laminate. Light passing through the larger openings creates a stronger interaction between interior and exterior spaces. Large White Square balances structural clarity with textile softness. The result is a refined architectural material that allows light and visibility while maintaining visual order and calm.

Material & Construction

- Laminated textile glass
- Textile layer: dense white poplin textile
- Chemical perforation with 10 × 10 mm square openings
- Grid structure preserved within laminated glass
- Visible textile fibers embedded within the laminate
- Double-sided visual effect through textile structure

Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

Applications

Office interiors · Space partitions · Architectural screens

Customization

Perforation density, textile type, panel dimensions, and transparency levels can be adapted according to architectural project requirements.

Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
