## SPY VIEW

### View Series

### Product Description

Spy View is a laminated textile glass in which the textile membrane is screen printed and chemically manipulated to create controlled openings across the surface. Selected areas of the fabric remain intact while others are perforated, allowing partial views through the glass. From a distance, the surface appears graphic and almost lace-like, defined by a delicate network of lines and openings. As the observer approaches, the textile character becomes visible through fine fibers and subtle irregularities preserved within the laminate. Light passing through the perforations produces strong shadow patterns that shift throughout the day, introducing movement and spatial depth. Spy View transforms transparency into an architectural device, balancing visibility, privacy, and shadow within a single material surface.

### Material & Construction

- Laminated textile glass
- Textile layer: screen-printed textile membrane
- Selective chemical perforation creating controlled openings
- Printed and perforated textile structure preserved within laminated glass
- Visible textile fibers embedded within the laminate
- Double-sided visual depth through textile structure and perforation

### Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

### Applications

Building facades · Space partitions

### Customization

Perforation density, textile type, printed structure, panel dimensions, and transparency levels can be adapted according to architectural project requirements.

### Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
