LARGE TEXT SEDIMENT

Text Textile Collection

Product Description

Large Text Sediment is a laminated textile glass in which enlarged typography is embedded within a pigment-dyed textile membrane. The textile is chemically perforated so that the letterforms become openings within the fabric, allowing light and partial views to pass through the glass. Before lamination, the textile is dyed with dispersed pigments that spread and settle organically across the surface. The sedimentation softens the graphic clarity of the enlarged text and introduces mineral-like tonal variation across the material. From a distance, the text remains legible and readable as an architectural statement. At closer range, the pigment variations, textile fibers, and perforated letter edges become visible, revealing the layered structure preserved within the laminate. Large Text Sediment balances communication and atmosphere, transforming text into a spatial element rather than a purely graphic message.

Material & Construction

- Laminated textile glass
- Textile layer: chemically perforated textile with enlarged text motif
- Dispersed pigment dyeing creating sedimentation patterns
- Residual textile fibers preserved within the laminate
- Perforated letterforms embedded within laminated glass
- Double-sided visual depth through textile structure and perforation

Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

Applications

Feature walls · Architectural surfaces · Interior partitions

Customization

Text content, typography scale, pigment tone, textile type, and panel dimensions can be adapted according to architectural project requirements.

Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
